

# ELECTROMAGNETIC CHUCKS

## Model KET-U TILT TYPE ELECTROMAGNETIC CHUCK

KET-1545UF

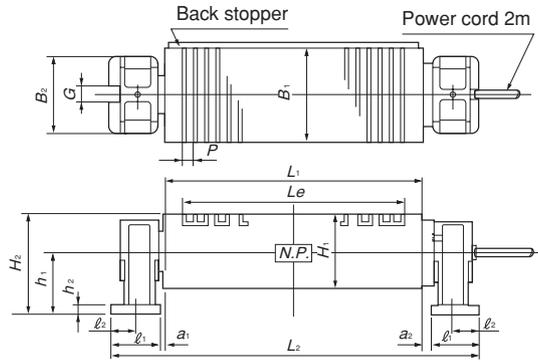

**Chuck controller required additionally**

**[Application]**

Suitable for grinding inclined faces of jigs/fixtures and metal molds.

**[Features]**

- Easy mounting and an angle can be set as desired in a range of 90° forward and 90° backward.
- The rotary shaft with scale facilitates angle setting.
- A resin-bonded structural face plate having little environmental burden is employed.

Model	Nominal Size	Work Face			Pole pitch		Tilt Base						Length	Height	Voltage	Current	Mass	Electro Chuck Master	Remarks

KET-2060UF	200 (7.87) × 600 (23.6)		600 (23.6)	548 (21.5)										742 (29.2)			0.47A	89kg/196 lb			

\*If the magnetic force needs not be adjusted, use ES-M. \*The chuck controller and clamp parts are not included. The KANETEC chucks work best when a KANETEC chuck controller is used.  
\*The scaled ring can be used to set an angle roughly. When it is necessary to set the angle accurately, use a sine bar or other suitable device.

## Model KEZ-H ELECTROMAGNETIC CHUCK WITH HARD ATTRACTIVE FACE

KEZ-H1138UF

**Chuck controller required additionally**

**[Application]**

Suitable for grinding inclined faces of jigs/fixtures and metal molds.

**[Features]**

- An electromagnetic chuck with a hardened attractive face. The face plate is less susceptible to damage and the frequency of self-grinding can be reduced. Also for self-grinding, the grinding wheel needs not be replaced, thus shortening the setup time.
- A resin-bonded structural face plate having little environmental burden is employed.

\*The chuck controller and clamp parts are not included. The maximum performance can be obtained by using the Chuck Master Model EH-V.

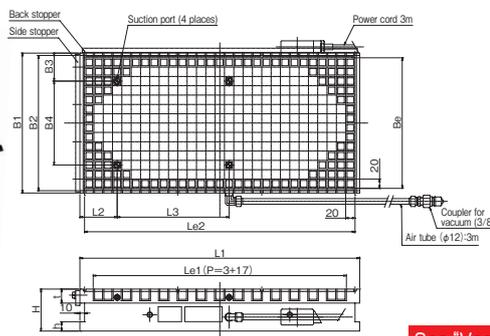

## Model KETV ELECTROMAGNETIC CHUCK WITH VACUUM CHUCK FUNCTION

KETV-3060F

**Chuck controller required additionally**

**Vacuum system required additionally**

**[Application]**

An electromagnetic chuck with a vacuum chuck function of grid seal type added. The vacuum chuck function enables it to hold nonmagnetic workpieces also.

**[Features]**

- The height has been reduced by 35 mm.
- The vacuum chuck can be configured to a desired usage area using seal rubber.
- Since vacuum is maintained by use of seal rubber, a high degree of vacuum can be maintained even when workpieces are slightly warped.
- Usable in wet operations.
- A resin-bonded structural face plate having little environmental burden is employed.

See "Vacuum Chucks" on pages P43 to P46 also.

Model	Nominal Size	Work Face				Pole pitch		Mounting Face		Height	Grid Pitch	Voltage	Current	Mass	Applicable Vacuum System

KETV-60100F	600 (23.6) × 1000 (39.4)	600 (23.6)	1000 (39.4)						480 (18.8)	480 (18.8)			3.4A	360kg/793 lb	

\*Seal rubber φ6, 10 m is included. \*The chuck controller and vacuum system are not included. \*The KANETEC chucks work best when a KANETEC chuck controller is used.
